Overview

IBM® Connections Cloud provides an intuitive set of cloud-delivered online technologies for businesses that combine social networking and online collaboration, messaging, and web conference tools. With Connections Cloud, companies benefit from essential and effective collaboration tools that help simplify and improve daily business interactions between customers, partners, and colleagues. The power of Connections Cloud is that it is designed to give companies the ability to collaborate and easily work with others inside and outside the firewall.

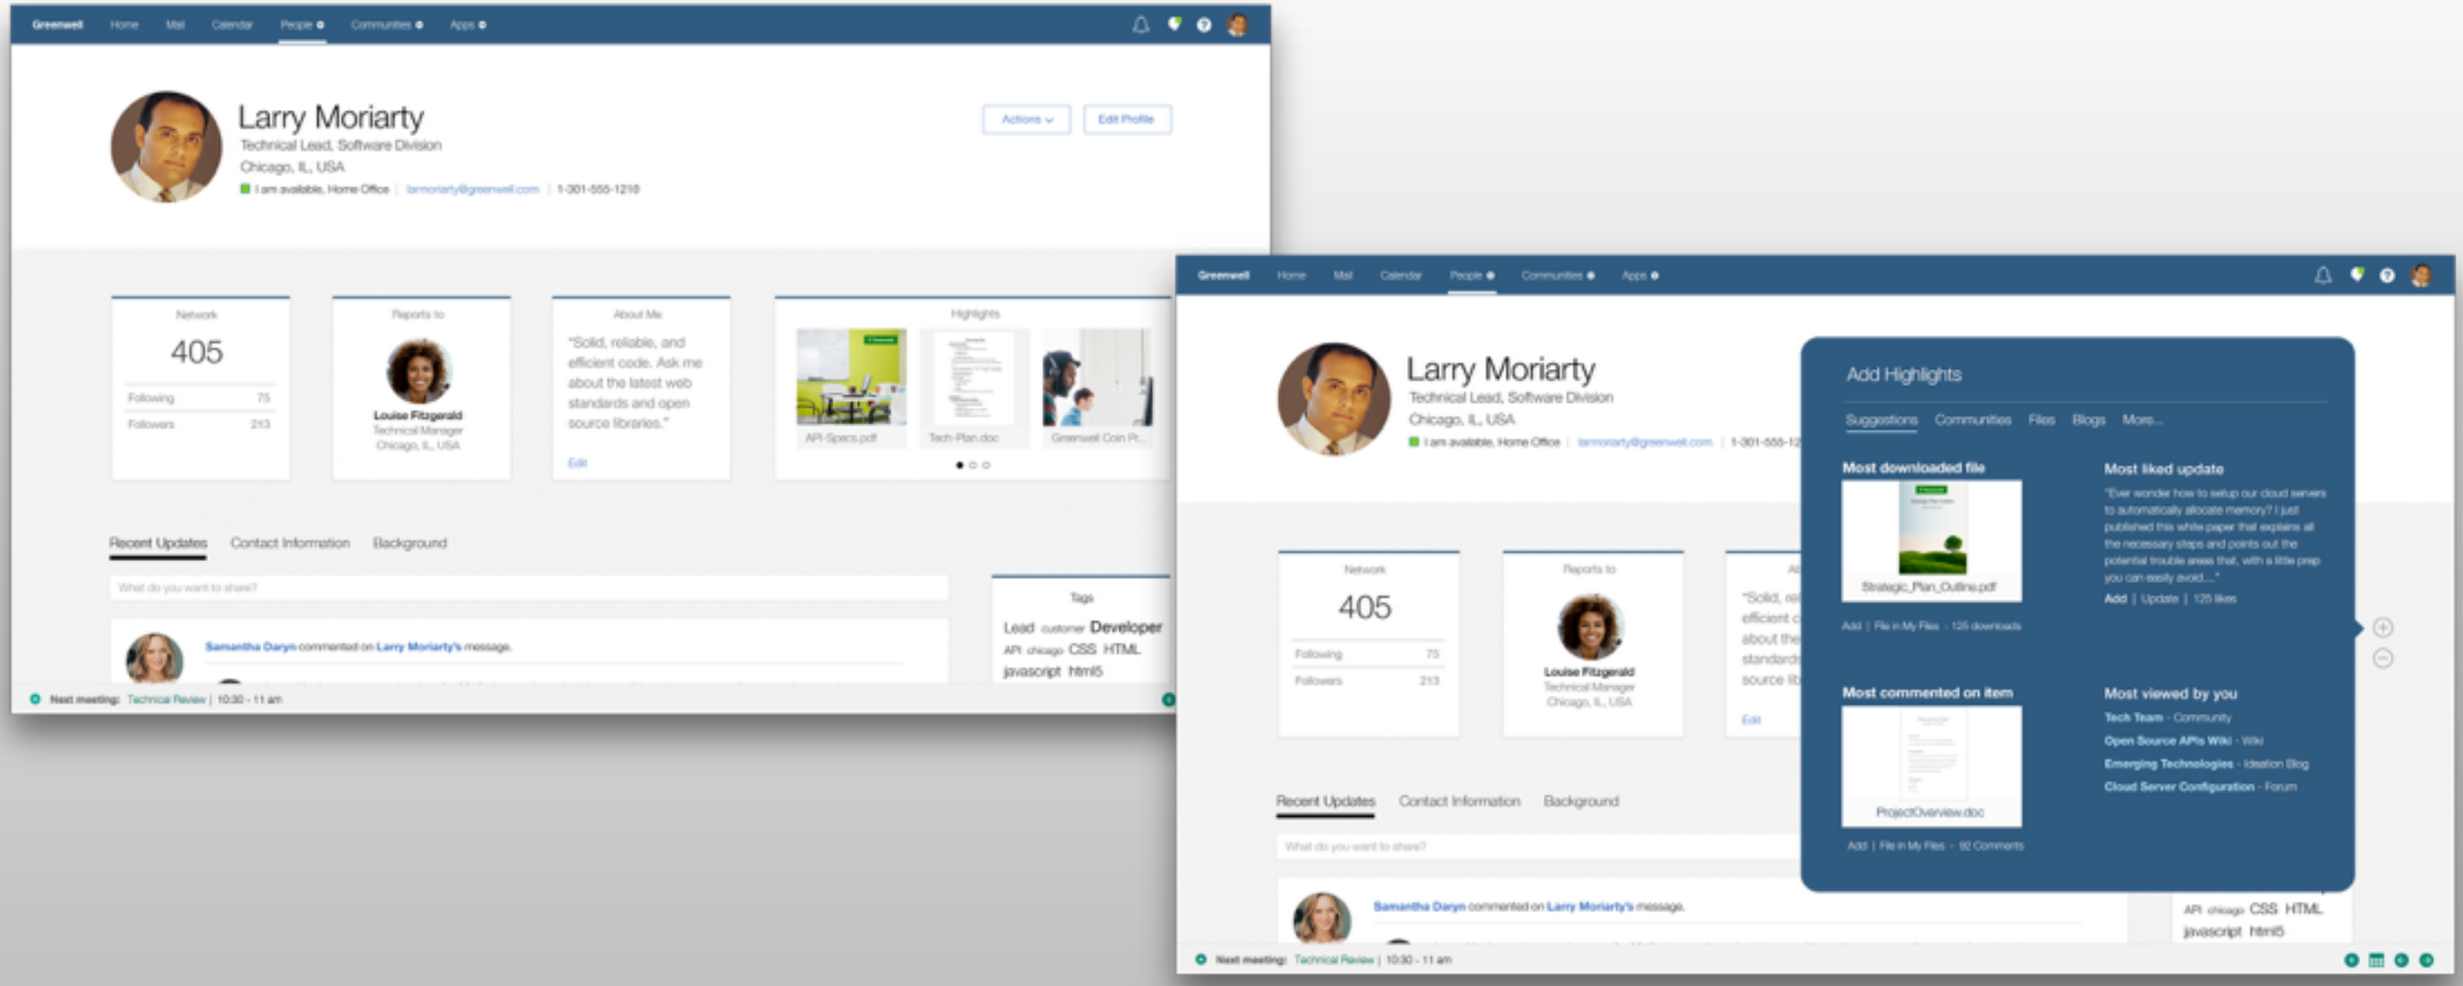
IBM Connections Files Cloud, a Connections Cloud offering, is a new standalone cloud-delivered service that combines the ability to share files with internal and external users with the ability to synchronize users' files across their own devices. Small to medium businesses, line-of-business departments, or corporate IT can sign up easily and start using the service immediately. The familiar browser interface, desktop clients, and mobile applications provide simple ways to get to the most important files and keep them in sync with other users and devices.

Connections Files Cloud gives users the ability to upload, store, and share files in a centralized library, where you can control access of files to be private or shared with individuals or groups, as readers or authors. Users can easily and securely share documents with colleagues, customers, and partners while helping to comply with corporate IT policies and reducing the organization's risk for loss of corporate intellectual capital.

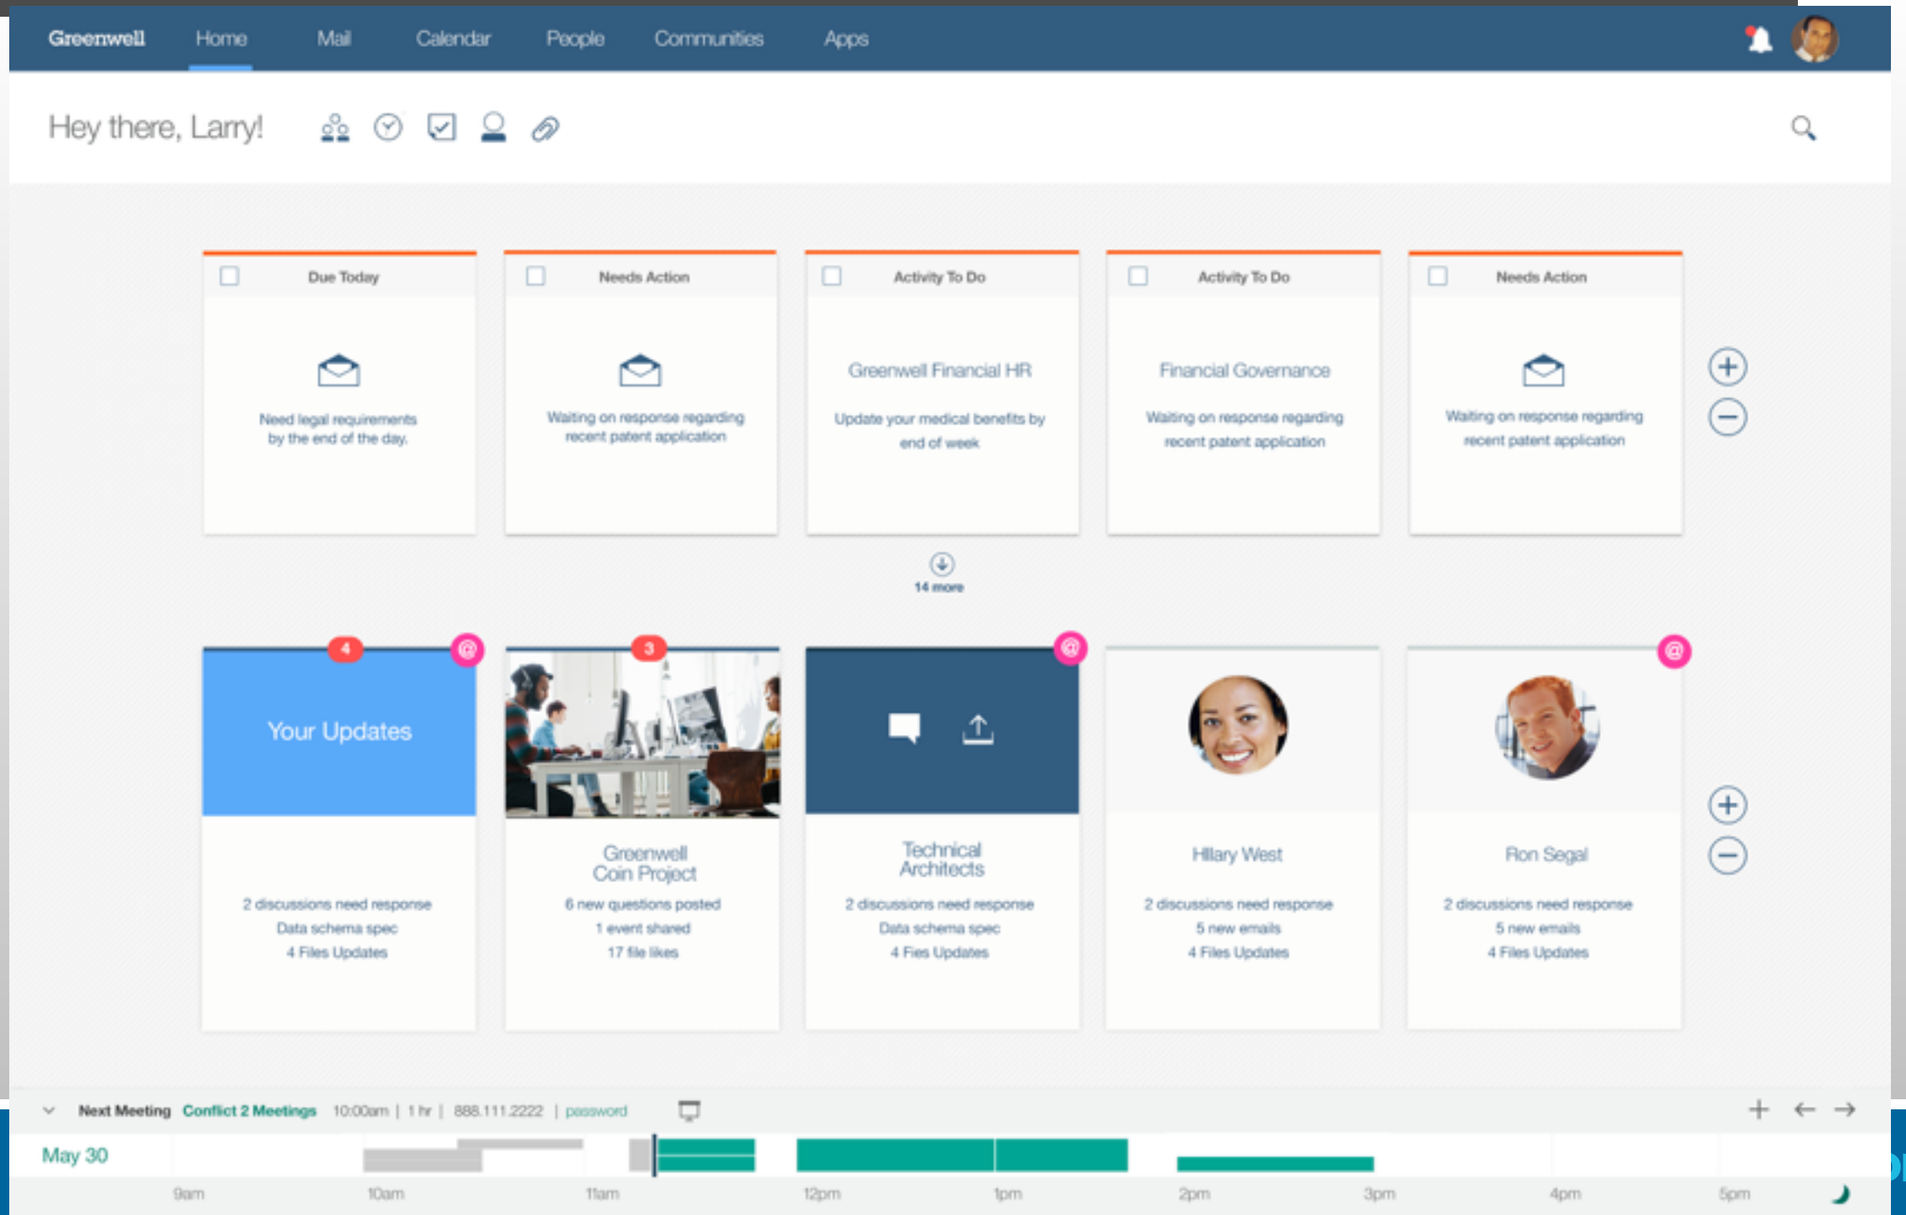
IBM CONNECTIONS: BEYOND

What to expect in the future

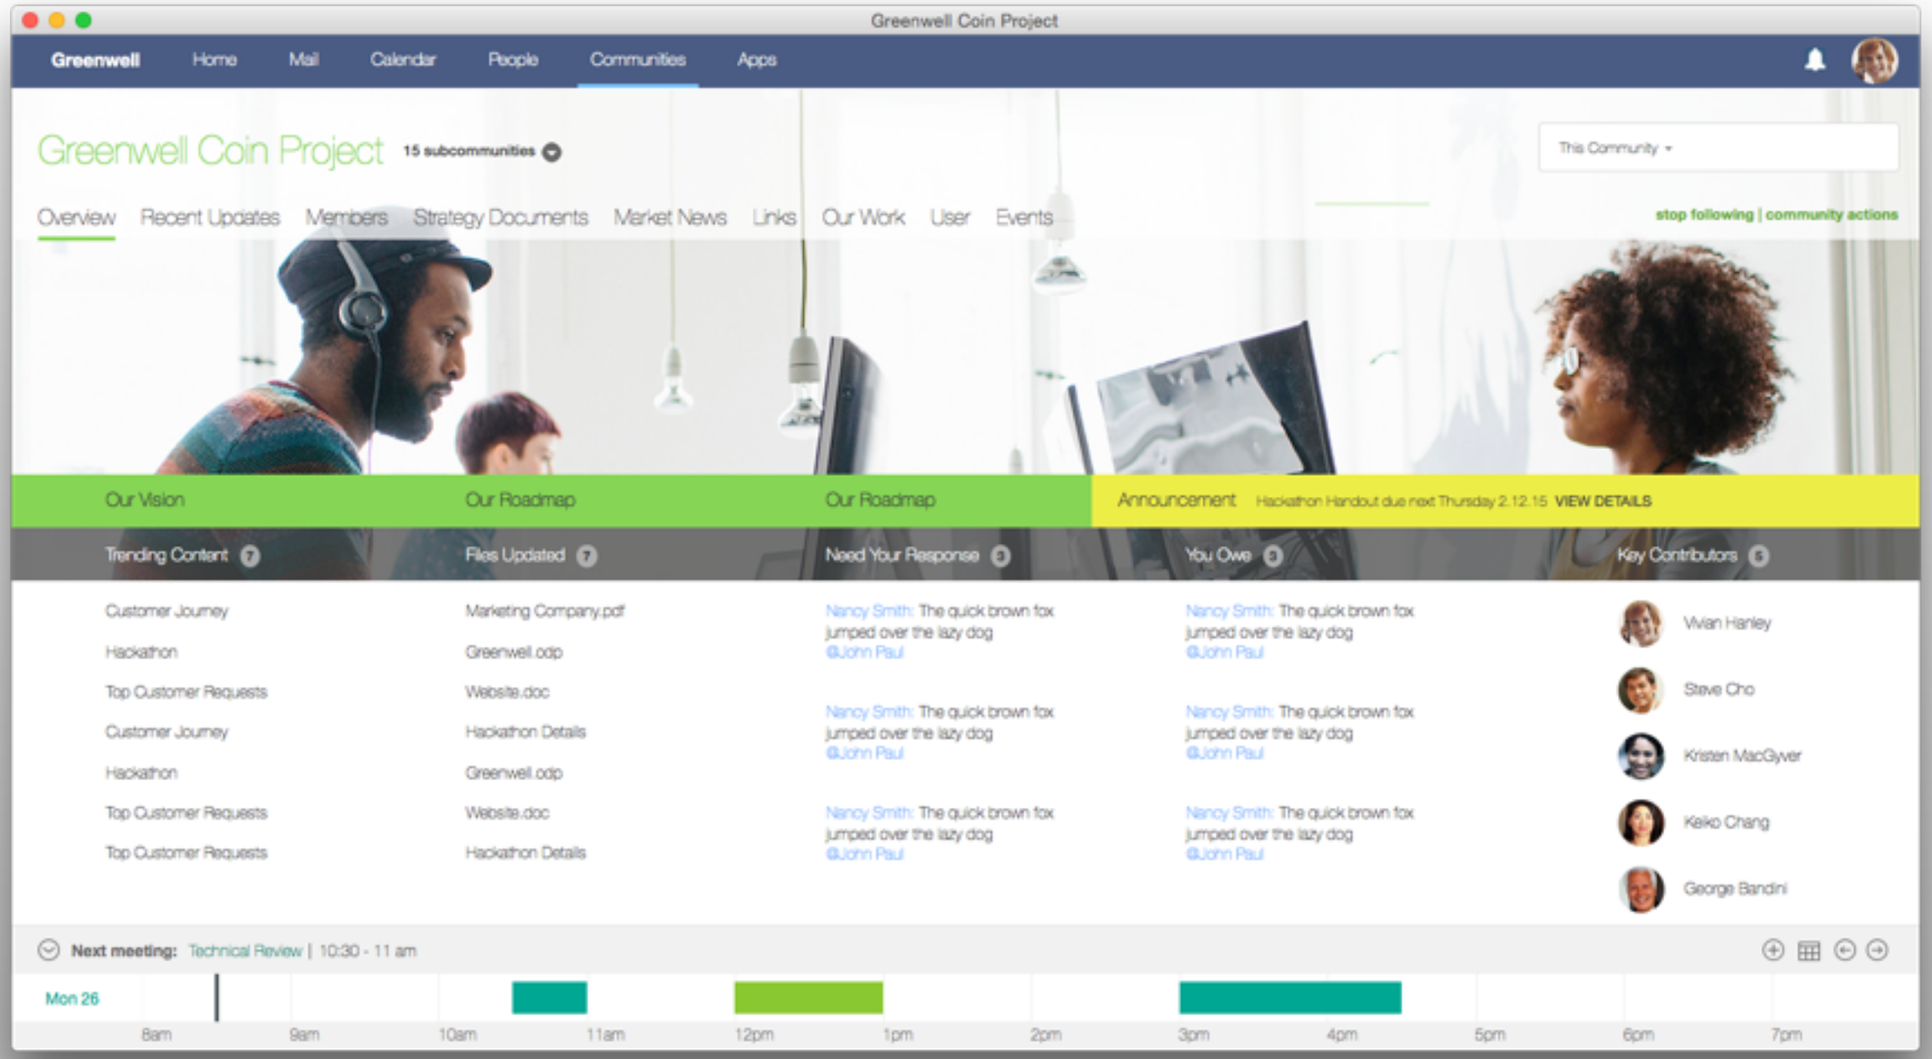
Simplify Your Work / Reduce the Cognitive Burden



Integrate Your Work



Innovate Your Work



IBM DOCS

What to expect in the next version (actually out already by now)

New graphical installer
